

PAVE System for Singapore Islamic Hub

The recently completed Singapore Islamic Hub at Braddell Road is made up of 4 new blocks of building – the Prayer Block, Education Block, Community Block and MUIS Block. It houses a 3-storey Mosque among other teaching facilities such as a Multi-Purpose Hall, Theatre, Function Rooms, Boardrooms, Meeting Rooms and Classrooms.

These blocks are linked by fibre optics and AV cabling to facilitate the sharing of AV resources and enable the hub to function as a single entity. PAVE System Pte Ltd undertook the retrofitting of the entire system integration process.

The mosque's Prayer Hall's AV system consisted of a distributed sound system by EV & TOA speakers,

Yamaha amplifiers and Digital Signal Processors. During prayer sessions, the main hall's Sanyo projectors catered for the presentations and the process captured by PTZ cameras and distributed to other classroom sized sections via Sierravideo matrix switchers, Kramer scalars and distributors, while the smaller classroom sized sections made use of Sony projectors. AMX control systems were also included to enable the user to operate the system with ease.

The project was successful completed to client's satisfaction and with its entirety closely guided by AV and acoustic consultant, CCW Associates Pte Ltd.
